Verified key content

- "The study surveyed 438 anonymous adults who had used cannabis in the past year. Of those participants, nearly 56% said they also consumed alcohol."
- Cannabis-beverage consumers "drank 3.35 alcoholic beverages per week after starting cannabis drinks, compared with 7.02 drinks per week beforehand."
- "Nearly two thirds of respondents (62.6%) said they either reduced (61.5%) or completely stopped (1.1%) drinking alcohol."
- Cannabis-beverage users "were more likely to say they substituted cannabis for alcohol (58.6%) compared with those who used other cannabis products (47.2%)."
- Caveat: small convenience sample of cannabis users; direct evidence of substitution among users, not population-level attribution.
