Verified key content

- 2025 US wine market: approximately 329 million cases (down from 335.9 million in 2024) and approximately \$74.3 billion (down from \$75.5 billion): sales declined 2.0% by cases and 1.6% by dollars.
- Demand decline primarily driven by under-\$12 price-point wines; "hourglass" pattern with growth expectations in the \$20-29 and \$100-plus tiers.
- Private labels experiencing double-digit growth due to excess bulk wine inventory (led by Total Wine & More and Costco per the full report).
- Tasting room visits and average check sizes declined at smaller, direct-to-consumer-focused wineries.
- McMillan: "This is not a cycle you can wait out. The wineries still demonstrating growth are not betting on a return to normal - they are fundamentally altering how they engage with the consumer, manage inventory, and are redefining their brand's value proposition."
- McMillan: "We expect the decline in total market demand to improve in 2026, with the market bottoming in 2027 through 2028 before returning to modest growth rates."
- From the full report: "Boomers are now aging out of their peak consumption years - sunseting - and they are being replaced by Millennials and Gen Z drinkers who have a fundamentally different relationship with alcohol."
