Verified key content

- "benefit-to-cost ratios for generic advertising programs reported by researchers across a broad range of commodities are in the range of 4:1 to 6:1."
- Specific ratios: beef 5.6:1, pork 4.8:1, dairy 4.6:1, eggs 4.7:1, flowers 6.6:1, prunes 2.7:1, processed oranges 2:1 to 4:1.
- Free-rider caveat: "Allowing some individuals not to participate in the cost of checkoff-funded generic advertising to protect their individual rights to free speech, however, gives rise to free-riders."
- Why we saved it: the strongest general evidence FOR collective demand-building; measures industry-level surplus, not any single winery's margin, and is not wine-specific.
